RESEARCH EXPERIENCE	Research Assistant in Machine Learning <i>Harvard University</i> Studied predictive multiplicity: the ability for datasets to admit multiple equally accurate models with conflicting predictions. Developed integer programming tools and software to measure the severity of multiplicity. Compiled findings into first-author conference and workshop paper. <i>Advisors:</i> Flavio Calmon and Berk Ustun Research Assistant in Machine Learning <i>Haverford College</i> Designed new methods to quantify indirect feature influence in machine learning models using disentangled representations and adversarial learning. <i>Advisor:</i> Sorelle Friedler Research Assistant in Chemistry <i>Haverford College</i> Designed machine learning tools to optimize model performance, robustness, and interpretability for on-site oil identification. <i>Advisor:</i> Helen White Summer Research Intern <i>Prince William Sound Science Center</i> Automated salmon and herring tracking in Alaska using machine learning and sonar data. <i>Advisor:</i> Scott Pegau	SUMMER 2019 2017 – PRESENT 2017 – 2018 SUMMER 2018
